

602PC SUITE 4.2

Silent Installation Guide

602PC SUITE Silent Installation

602PC SUITE¹ can be installed in a silent and unattended manner in which there is no need for user interaction with the installation. A silent installation is performed by running the setup program with parameters entered on the command line.

Installation Parameters

Setup parameters are entered at the end of the path to the setup program in the command line or in the properties of the setup program shortcut. The following parameters are available:

Parameter	Description
-nodlg	Will run 602PC SUITE installation in silent mode
-type=paid multi	Preferred setup type (paid/multi)
-name="name"	Enter the user name
-comp="company"	Enter the company name ²
-regnum=	Enter the License ID
-path="path"	Define the path where to install 602PC SUITE
-pathdoc="pathdoc"	Define the path where the 602Documents folder containing sample binders and photo albums will be installed. This parameter is only needed in the following situations: <ul style="list-style-type: none">• When installing on Windows NT 4.0 SP5 or Windows 2003 Server that do not contain the folder for shared documents• When there is a need to change the default location of the 602Documents folder
-nospeech	Will not install the MS Speech API and sample voices ³
-winreboot	If installation requires a restart, this will reboot the computer without notice
-asoc	Will show the File type Association dialog that is used to register file types
-wdoc	Will associate .DOC files with 602Text
-xls	Will associate .XLS files with 602Tab
-rtf	Will associate .RTF files with 602Text
-jpg	Will associate .JPG files with 602Photo
-gif	Will associate .GIF files with 602Photo
-bmp	Will associate .BMP files with 602Photo
-pcx	Will associate .PCX files with 602Photo

¹ Silent installation of 602PC SUITE Paid will be unregistered when the installation is complete and the user will be required to register the program online. 602PC SUITE Multi-user will be registered when a Company name and License ID is entered with the -comp and -regnum parameters. Therefore, before you silently install 602PC SUITE Multi-user, launch the setup program as normal and register the product online with the purchased Registration Key. You will then receive the License ID by e-mail.

² With 602PC SUITE Multi-user, the name you enter as the -comp parameter must be the same as the company name you used to register the product online.

³ Microsoft Speech API 4.0 and sample voice SAM is installed by a separate program. If the -nospeech parameter is excluded; a dialog will appear to inform the user to install voice support. Please note that the Microsoft Speech API and sample voice is included with Windows 2000 and higher.

Parameter Notes

- A space must precede all setup parameters.
- The setup program will install 602PC SUITE and 602Documents to the default locations if the -path and -pathdoc parameters are omitted.
- Do not use the -regnum parameter if the -type parameter is set to paid. The paid version must be registered online when the installation is finished.
- When the -nodlg parameter is used, but the file association parameters are excluded, the setup program will not show the File type association dialog. It will check to see if Microsoft® Office is installed on the computer and if not found, setup registers the .DOC and .XLS file type with 602PC SUITE. If MS Office appears to be installed on the computer the setup program will not change the file associations. Likewise, when the setup program finds that the graphic formats are registered to Windows internal editor and the -nodlg parameter is used, it will register all file types to 602Photo.
- The setup parameters can be entered in any order.

WARNING! The syntax of setup parameters is different when spaces appear in the path to the SETUP.EXE program. Please review the examples.

Installation Example #1

Let's say we install 602PC SUITE Multi-user from a CD, and the CD appears as drive D:

1. Click Start – Run in Windows.
2. Enter the path to the SETUP.EXE program in the Open: field using the Browse... button, leave a space next to the path and enter the preferred setup parameters, e.g.

```
D:\pcs4.exe -nodlg -type=multi -name="john" -comp="company"
-regnum=CP1CMA-XXXXX-XXX-XXXXXXXXXX -path="C:\Program
Files\PCSUITE" -nospeech -winreboot -wdoc -xls -rtf
```

3. Click OK or press the Enter key to run setup.

Installation Example #2

Let's say we install 602PC SUITE Multi-user from a network disk that appears as drive E:

1. Click Start – Run in Windows
2. Enter the path to the SETUP.EXE program in the Open: field using the Browse... button, leave a space next to the path and enter the preferred setup parameters, e.g.

```
"E:\602PC SUITE\pcs4.exe" -nodlg -type=multi -name="john"
-comp="company" -regnum=CP1CMA-XXXXX-XXX-XXXXXXXXXX
-path="C:\Program Files\602PC SUITE" -nospeech -wdoc -xls -rtf
```

3. Click OK or press the Enter key to run setup.

WARNING! When spaces appear in the path to the SETUP.EXE program, quotation marks are required around the path to the SETUP.EXE program.
